Several medications are available for treating voice disorders. Depending on the cause of your voice disorder, you may need medication to  
reduce inflammation, treat gastroesophageal reflux or prevent blood vessel regrowth. Medications can be taken orally, injected into the  
vocal cords or applied topically during surgery.

Peritonsillar abscess (PTA), also known as quinsy, is an accumulation of pus due to an infection behind the tonsil. Symptoms include fever, throat pain, trouble opening the mouth, and a change to the voice. Pain is usually worse on one side. Complications may include blockage of the airway or aspiration pneumonitis.. They are typically due to infection by a number of types of bacteria.

Functional aphonia treatment Behavior re-adjustment voice therapy may be used to stabilize the regained voice. Therapy should be started immediately and it is mostly focused on correcting symptoms. Prompt therapy is very important to avoid a supposed serious risk that the aphonia will become permanent if the patient gets used to it.

The main treatments for laryngeal cancer are radiotherapy, surgery and chemotherapy. Radiotherapy or surgery to remove the cancerous cells from the larynx can often cure laryngeal cancer if it's diagnosed early. If the cancer is advanced, a combination of surgery to remove part or all of the larynx, radiotherapy and chemotherapy can be used.
