Architecture And

The Web Services

Architecture

consists of three

distinct roles as

given below :

Provider - The

provider creates

the web service

Online Library Net Web

Services it
available to client
application who
want to use it.

Requestor - A
requestor is
nothing but the
client application
that needs to
contact a web
service.

What are Web

Web Service Roles.

There are three major roles within the web service architecture –

Service Provider.

This is the provider of the web service.

The service provider

implements the service and makes it available on the

Online Library

Net Web

Internet. Service Requestor. This is any consumer of the web service.

The requestor utilizes an existing web service by opening a network connection and sending an XML request. Service Registry

Web Services

Architecture In

ASP.NET, a web

service is

essentially a

listener that

monitors a

particular URL

exposed via HTTP,

looking for

requests packaged

as SOAP messages.

Online Library

Net Web

When a request arrives, the ASP.NET runtime unpackages the request and calls the method for which the request is intended, passing in any parameters included with the request.

Net Web

Architecture -

ASP.NET in a
Nutshell [Book]

A Web Service is a
web application
that follows code-
behind architecture
such as the
ASP.NET web pages
but it does not
have a user
interface. A Web
Service application
is basically a class

Online Library

Net Web

Services
Architecture
And
Implementation

containing a method that is exposed over the Web using simple messaging protocol stacks. The methods of a Web Service are called web methods.

An Overview Of
Web Services In
.NET

So a Web Service

Online Library
