Here, the Egyptian pyramids provide the inspiration for another book, although this one is not, and does not claim to be, thoroughly up-to-date. Originally published in Czech in 1997, this is an English translation of the 1998 German edition, which in many ways reflects on the results of excavations by the University of Prague's Czech Institute of Egyptology up to the late 1990s. The book is an introduction to the pyramids and pyramid-builders of Egypt, attempting to answer many of the most frequently asked questions about their construction and meaning, set within Egyptian culture and politics.

An authoritative, superbly illustrated account of everything you ever wanted to know about Egypt's pyramids is now updated in a magnificent new edition From the ancient culture that created the pyramids to the excavation sites that have been discovered to date, Verner, a preeminent Egyptologist, recounts the history of ancient Egypt and describes the religious and political beliefs that gave rise to its great monuments, with illustrations throughout. A pyramid, as the posthumous residence of a king and the place of his eternal cult, was just a single, if dominant, part of a larger complex of structures with specific religious, economic, and administrative functions. The first royal pyramid in Egypt was built at the beginning of the Third Dynasty (ca. 2592-2544 BC) by Horus Netjerykhet, later called Djoser, while the last pyramid was the work of Ahmose I, the first king of the Eighteenth Dynasty (ca. 1539-1292 BC). Distinguished Egyptologist Miroslav Verner draws from the research of the earliest Egyptologists as well as the startling discoveries arising from the technological advances. His Pyramids offers a clear, authoritative guide to the ancient culture that created the pyramids five thousand years ago without iron or bronze, and with only the most elementary systems of calculation. As he explains the magnitude of this accomplishment, he also traces the stories and ideas of the intrepid scientists who have uncovered them. Nearly two decades have passed since Miroslav Verner's seminal The Pyramids was published. In that time, fresh explorations and new sophisticated technologies have contributed to ever more detailed and compelling discussions around Egypt's enigmatic and most celebrated of ancient monuments. In this newly revised and updated edition of The Pyramids, Verner's rich erudition and long years of site experience comes to bear on all the latest discoveries and archaeological and historical aspects of over 70 of Egypt's pyramids in the broader context of their more than one-thousand-year-long development. Lucidly written, with 300 illustrations, and filled with gripping insights, this comprehensive study illuminates an era that is both millennia away and vividly immediate. The most up-to-date, comprehensive, and essential record of Egypt's ancient monuments is now updated for a new generation.

Discusses the pyramids, peeling back the layers of these ancient structures to reveal something about the civilization that built them.

The Pyramids: Their Archaeology and History: Amazon.co.uk ...

This book is the most thorough and up-to-date report ever written about the ancient site of Giza. Authors Mark Lehner and Zahi Hawass, with more than four decades of collective involvement with Giza, here provide their unique insights into the site, bringing together a massive amount of information and evidence to make this book a record unparalleled in detail and scope. We may think of the pyramids as rising from the desert, isolated and enigmatic, yet they were originally surrounded by temples, tombs, vast cemeteries, and teeming towns of the living. All are brought to life in vivid detail with hundreds of illustrations, including detailed photographs of the monuments, excavations, and objects as well as plans, reconstructions, and the latest images from remote-controlled cameras and laser scans.

The ancient world comes to life in the first volume in a two book series on the history of Egypt, spanning the first farmers to the construction of the pyramids. Famed archaeologist John Romer draws on a lifetime of research to tell one history's greatest stories: how, over more than a thousand years, a society of farmers created a rich, vivid world where one of the most astounding of all human-made landmarks, the Great Pyramid, was built. Immersing the reader in the Egypt of the past, Romer examines and challenges the long-held theories about what archaeological finds mean and what stories they tell about how the Egyptians lived. More than just an account of one of the most fascinating periods of history, this engrossing book asks readers to take a step back and question what they've learned about Egypt in the past. Fans of Stacy Schiff's Cleopatra and history buffs will be captivated by this re-telling of Egyptian history, written by one of the top Egyptologists in the world.

A vivid account of the men and women who revealed the treasures of Ancient Egypt to the world, from the first decipherment of hieroglyphics to the opening of the tomb of Tutankhamun.

The suggestion that the Giza pyramids were laid out to represent the stars of Orion's belt, with the position of the River Nile reflecting the Milky Way, was first put forward by the renowned author Robert Bauval in his bestselling book The Orion Mystery. In Before the Pyramids, Knight and Butler reveal that the British henges were arranged in the same formation—but much earlier. They also present irrefutable evidence that the astronomical calculations determining the layout of the pyramids could only have been made from the site of the henges in North Yorkshire. From this they can conclude that the pyramids of the pharaohs were conceived and planned in Britain! Their next stunning discovery takes us to modern times. They have found evidence that the whole Megalithic measuring system has survived into the 20th century. There are examples in Washington, DC—even in the positioning and construction of the Pentagon, which was only commenced in 1942 and is an exact copy of the dimensions of Stonehenge, dating to 3,000 BC.

National Geographic Explorer and TED Prize-winner Dr. Sarah Parcak welcomes you to the exciting new world of space archaeology, a growing field that is sparking extraordinary discoveries from ancient civilizations across the globe. In Archaeology from Space, Sarah Parcak shows the evolution, major discoveries, and future potential of the young field of satellite archaeology. From surprise advancements after the declassification of spy photography, to a new map of the mythical Egyptian city of Tanis, she shares her field's biggest discoveries, revealing why space archaeology is not only exciting, but urgently essential to the preservation of the world's ancient treasures. Parcak has worked in twelve countries and four continents, using multispectral and high-resolution satellite imagery to identify thousands of previously unknown settlements, roads, fortresses, palaces, tombs, and even potential pyramids. From there, her stories take us back in time and across borders, into the day-to-day lives of ancient humans whose traits and genes we share. And she shows us that if we heeded the lessons of the past, we can shape a vibrant future. Includes illustrations
