The Handbook of the Sociology of Health, Illness & Healing advances the understanding of medical sociology by identifying the most important contemporary challenges to the field and suggesting directions for future inquiry. The editors provide a blueprint for guiding research and teaching agendas for the first quarter of the 21st century. In a series of essays, this volume offers a systematic view of the critical questions that face our understanding of the role of social forces in health, illness and healing. It also provides an overall theoretical framework and asks medical sociologists to consider the implications of taking on new directions and approaches. Such issues may include the importance of multiple levels of influences, the utility of dynamic, life course approaches, the role of culture, the impact of social networks, the importance of fundamental causes approaches, and the influences of state structures and policy making.

subjects, and which will be of value in courses on women's studies and gender. It will also be of interest to inquiring health care practitioners of whatever persuasion." - Sociology "This book takes a bold step in pointing new directions for sociological and social-historical studies of health and health care." - Social History of Medicine Throughout the book, the division of labour in health care, especially as it relates to social class and gender divisions, is taken as central. Its particular characteristic, and one that distinguishes it from other texts in this field, is that feminist critiques of health care are considered alongside the mainstream writing in the social history of medicine, and in medical sociology. Part I takes an historical approach to the types of healing knowledge, the modes of treatment, and the organization of health care found in Europe over the last four hundred years. Part II is a sociological analysis of contemporary health care covering concepts of health and illness, the organization of the National Health Service, the division of labour, the impact of international capitalism, and the issues at stake in arguments about human reproduction.

It is now accepted that many of the determinants of health and health care are social. This volume offers a philosophical and theoretical frame within which the nature and extent of this might be optimally examined. The analysis is rooted in Roy Bhaskar's basic and dialectical critical realism, although it draws also on the critical theory of Jurgen Habermas. It purports to provide an ontologically and epistemologically grounded comparative sociology of contemporary health and health care in the twenty-first century. Carrying a fourfold agenda, the volume sets out a dialectical critical realist frame for a comparative sociology of health and health care; it clarifies sociology's potential and limitations; it suggests a research programme and a series of questions for investigation; and it offers an argument for an action sociology embedded in a dialectical theory of transformative action. This volume will be of interest to students and scholars in the areas of philosophy, sociology and critical realism, as well as those working in health and social care.
