From the dawn of humanity, the desire to control the thoughts, behaviors, and actions of others has been a pervasive one. From the use of coercive persuasion by ancient Egyptians and the Knights Templar to today's claims of electronic harassment and microwave "bombing," we have always been at the mercy of those who wish to reprogram our thoughts and reshape our beliefs. Mind Wars includes fascinating stories of: Ancient attempts at mind control using spell casting, potions, and rituals. Cults and the use of mental reprogramming. More modern mind-control techniques, from hypnosis, drugs, and electroshock to radiation and psychic driving. The inside story of the quest for a real Manchurian Candidate—MKUltra and the CIA connection. The brave new world of electronic harassment, "voice to skull" technology, and gang-stalking. The inner frontier of the human mind is the last bastion of privacy. But are we really in control of our own minds? The answer may shock you!

George Collins' discovery of Cylindrical Algebraic Decomposition (CAD) as a method for Quantifier Elimination (QE) for the elementary theory of real closed fields brought a major breakthrough in automating mathematics with recent important applications in high-tech areas (e.g. robot motion), also stimulating fundamental research in computer algebra over the past three decades. This volume is a state-of-the-art collection of important papers on CAD and QE and on the related area of algorithmic aspects of real geometry. It contains papers from a symposium held in Linz in 1993, reprints of seminal papers from the area including Tarski's landmark paper as well as a survey outlining the developments in CAD based QE that have taken place in the last twenty years.

The Art of Proof is designed for a one-semester or two-quarter course. A typical student will have studied calculus (perhaps also linear algebra) with reasonable success. With an artful mixture of chatty style and interesting examples, the student's previous intuitive knowledge is placed on solid intellectual ground. The topics covered include: integers, induction, algorithms, real numbers, rational numbers, modular arithmetic, limits, and uncountable sets. Methods, such as axiom, theorem and proof, are taught while discussing the mathematics rather than in abstract isolation. The book ends with short essays on further topics suitable for seminar-style presentation by small teams of students, either in class or in a mathematics club setting. These include: continuity, cryptography, groups, complex numbers, ordinal number, and generating functions.
