Viruses are not cells but non-living, infectious particles. They are capable of causing a number of diseases, including cancer, in various different types of organisms. Viral pathogens not only infect humans and animals, but also plants, bacteria, protists, and archaeans.

Viruses: Structure, Replication, and Diseases

Alive or not, viruses are an indisputable component of our planet's interdependent life systems. While virologists, scientists who study viruses, have worked diligently to understand, prevent and manage diseases caused by viruses, efforts have also been underway to understand viruses that are not responsible for disease.

Understanding Viruses, Third Edition

When germs, such as bacteria or viruses, invade the body, they attack and multiply. This invasion, called an infection, is what causes illness. The immune system uses several tools to fight infection. Blood contains red blood cells, for carrying oxygen to tissues and organs, and white or immune cells, for fighting infection.
