the atmosphere and
back again.

Evaporation is when
the sun shines on
water and heats it,
turning it into gas
called water vapour
which rises into the
air.; Transpiration is
when the sun warms
people, plants and
animals and they
release water vapour
into the air.

Cycle Diagram

Natural water cycle

The water cycle is made up of five stages; evaporation, condensation, precipitation, run off and infiltration. Each of these stages are vital to the way we get our water and to the continuation of the water cycle. The water cycle starts when

Download File

PDF Water

water is taken from the oceans and lakes when it is heated up by the sun, this process is known as evaporation.

The Water Cycle - Year 7 geography

Water cycle, cycle that involves the continuous circulation of water in the Earth-atmosphere system.

Download File

PDF Water

Of the many processes involved in the water cycle, the most important are evaporation, transpiration, condensation, precipitation, and runoff. The total amount of water remains essentially constant.
